(54) Title: A METHOD AND SYSTEM TO ENABLE EMAIL SERVICES FOR MOBILE DEVICES

(57) Abstract: The invention is a method and a system, which allows the integration of email-enabled devices into a carrier service network without the need for user individual configuration of the devices. A system with an email proxy and a database is provided for handling email requests from a terminal. The network address of the terminal is used to retrieve email configuration settings from the database, whereupon the email proxy is able to communicate with an email server using the retrieved email configuration settings.
